Instructions for connecting to PITT OHIO
Shipment Tracing by BOL Number with ETA for our B2B customers:

In order to display POE tracking information via your bill of lading number from your website, please encode the following link:

https://pittohio.com/WebServices/RestServices/api/b2bGatewayBOL/Get?irv=identifier&selMonth=MonthOfShipment&selDate=DayOfTheMonth&selYear=NumberIndicatingYearOfShipment&aryBOLs=BOLNumber

irv=
Is a required numeric identifier value that will be provided to you by PITT OHIO when you request use of this function. *This is a required parameter.*

selMonth=
A number between 1-12 indicating the month of the shipment.

selDate=
A number between 1-31 indicating the day of the shipment.

selYear=
A number, 0 or greater, indicating the year of the shipment. For example, 2000 = 0, 2003 = 3, etc.

aryBOLs
The BOLs to trace. Multiple BOLs can be entered as a string separated by "|".(12345|ABC123|123-456)

The date is required to narrow the search. Because your bill of lading number may not be unique across all of the companies we serve, the date helps to focus the search. We provide a tolerance of seven days in either direction of the date you specify in your request. If multiple shipments with dates exceeding a seven-day span are to be queried, we recommend using single bill searches.

Parameters and values are not case sensitive.

Please contact APIsupport@pittohio.com if you experience any problems or have questions with the contents of this guide or the software.
